(54) Title: DATA PROCESSING SYSTEM WITH CLUSTERED ILP PROCESSOR

(57) Abstract: The invention is based on the idea to specify operations from different cycles in one instruction and, consequently, to pipeline control connections to remote clusters. Therefore a data processing system is provided. Said system comprises a clustered ILP processor having a plurality of clusters each comprising at least one register file and at least one functional unit, as well as an instruction unit for issuing control signals to the clusters of said processor. The instruction unit is connected to each of said clusters via respective control connections. Furthermore, one or more pipeline register can be arranged in said control connections according to the distance between said instruction unit and the respective clusters.
